About This Edition

This is the first English translation of the *Sanen Kinsen Hiroku*. The manuscript was sourced and the translation project directed by Zach Booth. The original text is in *kobun* (classical Japanese) with *kanbun kundoku* reading marks in cursive script (*kuzushiji*) on aged paper. The translation was produced in two mechanically-separated stages:

1. Transcription. The manuscript images were passed through NDL 古典籍OCR-Lite, a specialist OCR toolchain released by Japan's National Diet Library for Edo-period and earlier classical texts. This step is purely mechanical: the model reads pixels, not meaning, and cannot interpolate from context it does not have.

2. Translation. The OCR output was then rendered into English with AI assistance (Claude Opus 4.6, Anthropic), working from the mechanical transcription and consulting the manuscript images only to sanity-check OCR artifacts.

On Confidence. Section headers, diagram labels, boxed tables, and structured lists (such as the sexagenary year cycles, the Three-Virtue verse-counts, and the four-stage method- diagrams) are legible in the OCR and reliably translated. The dense prose between these anchors varies: most is readable, but some stretches — particularly the afterword on page 32 and several long interval rows in the body — are fragmentary even to the OCR. Where the underlying transcription is difficult, the translation is marked *[Interpretive]*. Passages so flagged represent the reconstructed sense of the passage; they are not the author's exact words.

How to Read This Translation

The body text of this book is a direct translation of the source manuscript. The chapter and section headings are editorial, added for navigation. Footnotes marked "*Translator's note*" provide historical context, definitions, and comparative observations. Indented passages marked "*Editor's note*" provide brief editorial bridges where the manuscript's structure requires explanation. Chapter lengths vary because the translation follows the manuscript's own proportions — some topics receive extensive treatment in the source, others only a line or two.

Structure of the Text. Chapter 1 is the preface, grounding the book in Neo-Confucian cosmology and naming the Three Monkeys as a contrarian discipline. Chapters 2–3 establish the favorable/adverse year cycle and the enumerated maxims that act on it. Chapter 4 presents the four-stage method-diagrams (half-plank, at-ease, reversal). Chapter 5 is the sixty-year weather almanac. Chapters 6–7 build the decision framework: the Nine-Body Song and the forty-eight verses of the Three Virtues. Chapters 8–11 are the quantitative core: the World-Levels Diagram, the Strong-Qi / Weak-Qi five-stage secrets, the compound trades, the Grand Diagram, and the three first-tier family secrets. Chapter 12 is the editor's afterword.

Contents

Translator's Introduction **10**

1 The Preface: Cosmology of the Market **13**
1.1 The Supreme Ultimate 13
1.2 Sixty Years of Study 14
1.3 The Shape of the Rice Grain 14
1.4 The Three Monkeys 14
1.5 The Empty Principle and the Fixed Form 15

2 Favorable and Adverse Years **16**
2.1 The Twelve-to-Thirteen Year Cycle 16
2.2 Twelve-Cycle Trading of Favorable and Adverse Years . 17
2.3 Family Tradition: Mirror of the Four Seasons 17

3 The Thirty-Eight Articles and the Fifteen Prohibitions **19**
3.1 The Thirty-Eight Articles of Trading 19
3.2 The Fifteen Prohibitions (十五ヶ条禁制) 20

4 The Method Diagrams: Half-Plank, At-Ease, Reversal **22**
4.1 The Autumn-Moon Eight-Hundred-Ryō Ladder 22
4.2 The Half-Plank Diagram 23
4.3 The At-Ease Diagram 24
4.4 The Reversal Diagram 25

5 The Sixty-Year Fortune-Qi Almanac **27**
5.1 Violent Winds — Twelve Years 27
5.2 Great Floods — Five Years 28
5.3 Cold and Chill — Three Years 28
5.4 Continuous Rains — Two Years 28
5.5 Extreme Misfortune — Eight Years 28
5.6 Abundant Harvest — Twenty-Eight Years 29
5.7 Middling Abundance — Two Years 29
5.8 On the Great and Small Tides (大潮小汐の考) 29
5.9 The Wind-Free Interval 30

6 Weather Signs and the Nine-Body Song **31**
6.1 On the Entry of the Rainy Season (入梅三十日) 31

6.2 On Rainbows (虹図) 31
6.3 The Hassen Twelve Days (八専十二日) 31
6.4 On the Standing Cloud (玄雲) 31
6.5 Song of Nine Bodies (九躰ノ歌) 31

7 The Three Virtues Forty-Eight Verses 33
7.1 Four Fixed-Form Rules 33
7.2 Wisdom (智) — Ten Verses 34
7.3 Benevolence (仁) — Twenty-Eight Verses 34
7.4 Courage (勇) — Ten Verses 35

8 The World-Levels Diagram and the Five-Stage Secrets 36
8.1 The National Reference Figures 36
8.2 The World-Levels Diagram (世の中三段之図) 37
8.3 The Strong-Qi Five-Stage Secret (強気五ツの秘伝) 38
8.4 The Weak-Qi Five-Stage Secret (弱気五ツの秘伝) 39

9 The Compound Trades and the Seven Fortunes 40
9.1 The Strong-Qi Reverse-Weight Trade 40
9.2 Favorable-Virtue Reverse-Loss Variants 40
9.3 The Random-Edge Trade (度端一六の商内) 41
9.4 The Stake-Use Trade (立用商内) 41
9.5 The Follow-the-Color Trade (随色商内) 41

10 The Grand Diagram 42

11 Strong Qi, Weak Qi, and the Three First-Tier Secrets 44
11.1 The Bullish Bias 44
11.2 The Effect of Strong Qi (強気の功) 44
11.3 The Effect of Weak Qi (弱気の功) 45
11.4 The Rarity of the Perfect Year 45
11.5 The Three First-Tier Secrets 45
11.6 Yin-Rice and Yang-Rice (陰米陽米) 45

12 Afterword 46
12.1 The Opening Invocation 46
12.2 A Single Step, a Thousand *Ri* 46
12.3 Why Publish Now 47
12.4 To the Discerning Reader 47

A.4 The Weak-Qi Five-Stage Secret 56

Translator's Introduction

The *Sanen Kinsen Hiroku* (三猿金泉秘録), or "Three Monkeys Gold Spring Secret Record," is one of the most celebrated texts in the history of Japanese market speculation.[1]

The title alludes to the proverb of the three monkeys—"see no evil, hear no evil, speak no evil" (見ざる、聞かざる、言わざる)—reinterpreted as a warning to the trader: do not be swayed by what you *see* others doing, what you *hear* as rumor, or what you *say* in haste. Instead, observe the deeper patterns.

Authorship and the Edo Rice Market

The manuscript names its author as Ushida Gonzaburō (牛田権三郎), an Osaka Dōjima trader from Ise province who wrote under the pen name Jiunsai (慈雲斎). The text was composed around 1755 and later revised and corrected by Narukawa Takenosuke (鳴川猛之助). It belongs to a genre of "secret market transmission texts" (相場秘伝書, *sōba hidensho*) that circulated among Edo-period trading houses.[2]

During the Tokugawa period (1603–1868), rice was the basis of the economy. The Dōjima Rice Exchange (堂島米会所) in Osaka functioned as a sophisticated futures market where "book rice" (帳合米) was traded as forward contracts.[3]

A Note on Attribution

English-language sources almost universally attribute this text to Honma Munehisa (本間宗久) of Sakata, often under the title "The Fountain of Gold—The Three Monkey Record of Money." This attribution is incorrect.

---

[1] *Translator's note:* The manuscript is dated 嘉永四年五月廿日 (1851) and identifies itself as a copy of the Kōmondō (好問堂) edition, published at Igarashi-tsu (五十嵐津). The text references the Tenmei era (1781–1789) extensively for its price data.

[2] *Translator's note:* The inner title page of the manuscript appears to bear a small label that may read 三猿軍書選 (*Sanen gunsho sen*, "Selection from the Three Monkeys Military/Strategy Books"), though the label is partially obscured and this reading is uncertain.

[3] *Translator's note:* The Dōjima Rice Exchange was established in 1697 as a spot market. Organized futures trading (帳合米) was formally authorized by the shogunate in 1730, making it one of the world's first organized futures markets.

The manuscript names its author as Ushida Gonzaburō and its editor as Narukawa Takenosuke—as do the National Diet Library catalog, the CiNii bibliographic record, and every Japanese-language reference work that discusses it. In Japanese scholarship, this is not controversial: the NDL, CiNii, Kyoto University's digital archive, and sources from Honma's own hometown (the Shonai Securities company of Sakata) all attribute the *Sanen Kinsen Hiroku* to Ushida.

Honma Munehisa was a real historical figure—a Sakata trader who was expelled from his own family for speculating with company capital and who became legendary in his own right. Texts were later attributed to him (the *Sōkyū-ō Hiroku* and *Sōba Sanmai-den*), though no Edo-period originals of these survive; Japanese scholars suspect they were compiled in the Meiji era. Honma's texts have entirely different titles and contents from Ushida's.

The confusion appears to have entered English through Steve Nison's influential *Japanese Candlestick Charting Techniques* (1991), a book that did enormous service in introducing Japanese technical analysis to Western traders. In synthesizing a large body of Japanese-language material for an English-speaking audience, Nison consolidated several distinct figures and texts into a single narrative—an understandable simplification given the complexity of the source tradition. Nison himself corrected the record in *Beyond Candlesticks* (1994, p. 14), writing that his research indicated Honma "likely did not use candlestick charts." But the first book reached millions of readers, and the broader conflation of names and titles took on a life of its own.

In the decades since, English sources have merged Ushida's title with Honma's name, creating a phantom text: "The Fountain of Gold" (金泉) and "Three Monkeys" (三猿) are both from Ushida's title; the Honma texts have completely different names. Two English-language books have been published under variations of this text's title. Neither translates it. Both render a separate body of trading maxims from the Honma/Sakata tradition—a related but distinct lineage—while putting Ushida's title on the cover.

What follows is, to my knowledge, the first English translation of the actual *Sanen Kinsen Hiroku*, made directly from the 1851 manuscript held at Kyoto University.

A Note on Method

The translation proceeds in two mechanically-separated stages. The cursive manuscript pages are first read by a specialist OCR toolchain, NDL 古典籍OCR-Lite, released by Japan's National Diet Library for Edo-period and earlier classical texts. The OCR is mechanical: it reads pixels and emits characters, with no interpretive access to the text's meaning. An LLM (Claude Opus 4.6, Anthropic) then works from the mechanical transcription to produce the English, consulting the manuscript images only to sanity-check OCR artifacts.

The separation is deliberate. A single model asked to read cursive script and produce English in one pass has no way to distinguish between characters it has read and characters it has guessed, because both are generated by the same mechanism. Splitting the two stages makes the distinction visible: where the OCR failed, the book says so; where the OCR returned a plausibly-wrong character, the correction is flagged inline. Every English sentence is traceable back to a specific line of mechanical transcription, which is traceable back to a specific pixel-region of the manuscript scan.

The full audit trail — the manuscript scans, the mechanical transcription at the character level, and the translation files — is published alongside this book at the URL given in the back matter.

—Zach Booth

Chapter 1

The Preface: Cosmology of the Market

三猿金泉録序

Preface to the Three Monkeys Gold Spring Record

1.1 The Supreme Ultimate

THE SUPREME ULTIMATE[1] moves and begets Yang; its motion reaches its limit and becomes still. In stillness it begets Yin; stillness reaches its limit and moves again. Movement and stillness are the root of one another.

The principle of one stillness and one movement is the principle by which Heaven and Earth rise and fall. The rise and fall of rice — like the circuit of yin and yang — alternates between strong- spirited force and weak-spirited force, and each contains the seed of its opposite. When the strong force has driven prices to their ceiling, the weak force is already present within it; when the weak force has driven them to their floor, the strong force is likewise present.

When the crowd's spirit is weak, it is the principle of rice's rising. When the crowd's spirit is strong, it is the seed of rice's falling. All of this is the principle beyond ordinary nature (天性理外の理, *tensei rigai no ri*).

[1] *Translator's note:* 太極 (*taikyoku*) — the foundational concept of Neo-Confucian cosmology. The opening echoes Zhou Dunyi's *Taijitu shuo* (*Explanation of the Diagram of the Supreme Ultimate*, mid-11th c.).

1.2 Sixty Years of Study

For sixty years[2] I have cast my mind upon this craft, devising by day and by night, and have at length opened up the insight into rice's strong and weak forces. I have established the settled method of rice trading, and have compiled a single volume of secret writings, giving it the title *Three Monkeys Gold Spring Record*.

1.3 The Shape of the Rice Grain

The form of the rice grain: rounded in the middle, pointed at top and bottom. The round is yang; the pointed is yin.

Receiving the breath of Heaven, Earth, Yin and Yang, rice nourishes the four classes — warrior, farmer, artisan, merchant[3] — and is the first treasure of all under Heaven.

1.4 The Three Monkeys

The Three Monkeys are: the See-Monkey, the Hear-Monkey, and the Speak-Monkey.

When the eye perceives strong-spiritedness, do not let the heart sink into the abyss of that strength. Hold it only within the heart, and sell.

When the ear hears weak-spiritedness, do not let the heart sink into the abyss of that weakness. Hold it only within the heart, and buy.

Whether you see or hear the strong or the weak, do not speak of it to others. Words lead hearts astray. This is the secret of the three monkeys.

"Gold Spring Record"—this is the style of this book.

[2] *Translator's note:* 六十年来 (*rokujū-nen rai*). The phrase admits both a literal autobiographical reading ("for the past sixty years") and a more idiomatic "over many decades" sense; the literal reading is taken here in keeping with the following first-person clauses.

[3] *Translator's note:* 士農 工商 (*shi-nō-kō-shō*), the classical Japanese social stratification.

1.5 The Empty Principle and the Fixed Form

The principle of highs and lows is an empty principle (空理, *kūri*): not visible to the eye, a thing whose very body is without shade or form.

Reading the first line's sense: it is a principle by which neither the rise nor the fall is ever fixed — this is the empty principle. If we take it only as empty, we will find no hour in a thousand years to buy or to sell.

Reading the second line's sense: the formless thing does have a body. If there is a body, there is a fixed form (定式, *jōshiki*); if there is a fixed form, there is a trade.

The fixed form of Buddhism is the Five Precepts. The fixed form of Confucianism is the Five Constants. The fixed form of Shinto is the Three Virtues of Wisdom, Benevolence, and Courage. Each has its own fixed form.

Chapter 2

Favorable and Adverse Years

In years when old rice is plentiful and its low price transfers to the new rice, there is a rising force of markets. This is called a favorable year (順来, *junrai*).

In years when rice is scarce and the high price transfers to the new harvest, there is a downward force. Even if a strong rally appears in the sixth, seventh or eighth month, the year is one of downward force nonetheless. This is called an adverse year (逢来, *airai*).

2.1 The Twelve-to-Thirteen Year Cycle

The way of following favorable and adverse conditions: within a period of twelve or thirteen years, the favorable years run to roughly ten and the adverse to three. The settled form of trading divides into two, and comprises: the Twelve-Cycle Trading of favorable and adverse years; the Family-Tradition Mirror of Highs and Lows; the Thirty-Eight Articles of Trading; the Fifteen Prohibitions; and the Annual Record of Fortune-Qi and Plenty-and- Want.

Studied through, this is the wondrous art that does not lose once in a thousand attempts. Truly, the secret treasure of the family. Keep it secret, keep it secret.

宝暦五年秋九月下旬

Late ninth month, autumn of Hōreki 5 (1755)[1]

慈雲斎　牛田権三郎

Jiunsai, Ushida Gonzaburō

[1] *Translator's note:* The pen-name 慈雲斎 (*Jiunsai*) appears in the manuscript only here, directly above Ushida's given name. *Hōreki* 5 places the text's original composition nearly a century before the 1851 printing recorded in the colophon.

2.2 Twelve-Cycle Trading of Favorable and Adverse Years

〇順来逢来十二平商内　〔天明本〕[2]

Favorable year — six verses on autumn-and-winter highs and lows

Autumn cheap; an upward force; one and a half steps; the eleventh month falls; the year-end rises.

Spring breaks; the fourth and fifth months go down; the rice of the sixth month (Minazuki) and the seventh (Fumizuki) goes down.

Favorable year — six verses on the trading method

In autumn, buy; on the upward thrust, sell out and reverse; turn again on the auspicious month; the year-end is at ease.

In spring, reverse; in the fourth and fifth months, buy; at the end of the fifth month, sow this seed; settle by the end of the sixth, seventh, and eighth months.

Adverse year — six verses on autumn-and-winter highs and lows

Autumn high; downward force; one and a half steps; the eleventh month is cheap; even at year-end it does not rise.

Adverse year — six verses on the trading method

In autumn, the standing crop falls; on the downward push, buy a half-plank position; on the eleventh month's mid-festival, rest through year-end.

In spring, the market gives way at the fourth month; at the end of the fifth, sow the buying seed; settle by the end of the sixth, seventh, and eighth months.

2.3 Family Tradition: Mirror of the Four Seasons

〇家伝四季高安鑑　第二天明本

[2] *Translator's note:* The margin gloss 天明本 (*Tenmei-bon*), "Tenmei recension," recurs throughout the book and signals a parallel reading from a Tenmei- era (1781–1789) version of the text.

Autumn and winter in a favorable year

When old rice is plentiful and you read the year as abundant, know the cheap rice as a year of upward force.

Autumn and winter in an adverse year

When old rice is scarce and strong-spiritedness pushes out, know the high rice as the harbinger of a downward year.

Spring in favorable and adverse years alike

When you read it as a green rise and buy, the rice from the upper storehouse will not easily turn cheap. When you read it as a spring decline, the cheap winter rice will not easily settle low in spring either.

Late fifth month, the pivot

Fifth-month rice: sentiment is weak, yet the price rises. To the children and the children's children: selling is forbidden.

Chapter 3

The Thirty-Eight Articles and the Fifteen Prohibitions

3.1 The Thirty-Eight Articles of Trading

1

Year-reads and the spread signal

A favorable year: a downward force followed by a rise. At the harvest moon of autumn, sow the seed of buying.

An adverse year: a downward force followed by a further fall. At the harvest moon of autumn, sow the seed of selling.

When the spread flips from below-spread to above-spread, after the downward thrust comes the rise — close out your position on the gain.

When the spread flips from above to below, after the downward thrust comes the further decline — close out your position on the gain.

The two-hundred-tenth day

The year when strong-spiritedness emerges is set: select it, and on the two-hundred-tenth day[2] sow the seed of buying.

A monk says: study the *Annual Record of Fortune-Qi and Plenty-and-Want*; cultivate the strong-spirited stance; on the two-hundred-tenth day, sow the seed of buying. This is the sense of the verse.

---

[1] *Translator's note:* 三十八ヶ条商内: 商内 (*akinai*), glossed with furigana in the manuscript as the native Japanese reading rather than the Sino-Japanese *shōnai*. Each article opens with 一 ("one") and ends in a short trading rule.

[2] *Translator's note:* 二百十日 (*nihyaku-tōka*). Counted from the lunar-year start, it falls in early September; the text uses it as a fixed seasonal pivot for buying.

On public sentiment

The ear catching strong-spiritedness in the public voice is itself the seed of rice's coming fall.

When weak-spiritedness has emerged into the open, everyone turns strong-spirited without judgment — sow the seed of selling.

The year in which weak-spiritedness fails to emerge into the world is one in which rice ought to rise.

The contrarian maxims

If a rice whose climbing pace is plainly visible is in front of you, halt — stay your strong spirit and sell.

The man who is forever weak-spirited, knowing nothing of loss or gain — call him a great timid one, a parishioner of the poverty god.

The rhythm of the year

The great rule: late in the fifth month is the appointed time of selling; the harvest moon of autumn is the ripening of buying.

If the year accords with what the multitude expects, better to set out for an unfrequented path.

To buy your rice in a single stroke is rashness. Buy in two; sell in two.

Across a hundred *tsubo* of land, ninety-nine years of highs and lows do not exceed three steps — take this for fact.

Even by a single move, when the step has risen, it is nine-myriad one *bu*; know it as the selling season at the celestial origin[3] of a thousand.

3.2 The Fifteen Prohibitions (十五ヶ条禁制)

When a trade is without its proper attendant, then whether or not any gain or loss may be, trading is forbidden.

An abundant harvest: the multitude grows weak-spirited; I too grow weak. Coming into autumn, selling is forbidden.

A lean harvest: the minor-spirit is strong, and stronger again; when rice is plentiful, buying is forbidden.

[3] *Translator's note:* 天元 (*tengen*): the "celestial origin" recurs as the top stage-marker of every position ladder in the book.

When the rising step is so visible that even the rice itself seems to say so, though the year is strong, selling in the fourth month is forbidden.

Fifth-month rice: sentiment weak, yet the price rises. Until the strength is clearly in, selling is forbidden.

On great floods or great winds sending rice spiking upward — in any year, buying is forbidden.

Chapter 4

The Method Diagrams: Half-Plank, At-Ease, Reversal

> *Editor's note:* The three method-diagrams are each a four-stage *sequential cycle* — not a branching decision tree. Each specifies the fixed sequence of four actions a trader executes as the market moves through one complete up-and-down cycle. The differences between them are in the size-relationship between the buy and sell legs, which determines whether the cycle leaves the trader net long (half-plank), net flat (at-ease), or net short (reversal).

4.1 The Autumn-Moon Eight-Hundred-Ryō Ladder

大黒天神秋名月商内并二百十日商

The Daikoku-deity's autumn-harvest-moon trade, together with the two-hundred-tenth-day trade.

買桶三平二来半板安楽商内

Using the buy-bucket, three-flats-two-comings-half-plank- at-ease method.

The ladder builds an 800-*ryō* position across six named stages: 天元 (*tengen*) (the celestial-origin base reference), 一乗 (*ichijō*), 二来 (*nirai*), 三平 (*sanpei*), 半板 (*hanban*), and 安楽 (*anraku*) (at ease).

Summed: an 800-*ryō* buy, seventy *tawara* of accumulated rice, approximately thirty *ryō* in payment, forty *ryō* in deposit — altogether seventy *ryō*.[1]

In the harvest-moon trade, one ought to use this diagram as the square-rule and trade by it. When reversed, it becomes an 800-*ryō* sell. In the trade before the two-hundred-tenth day, likewise, one ought to trade by this diagram as the square-rule.

[1] *Translator's note:* The ladder runs as a tight column of small-hand characters at very low OCR confidence; the 800-*ryō* total is supported by multiple summed-row readings, but the 70/30/40/70 cell breakdown should be treated as approximate pending image audit.

A sister ladder on the following leaf, dedicated to Nishinomiya Ebisu and Sumiyoshi Daimyōjō, runs a 600-*ryō* variant with a 30-*tawara* bucket subtraction; another runs a 400-*ryō* trade with a reversal at the pivot. The same six stage-names recur in all three.

4.2 The Half-Plank Diagram

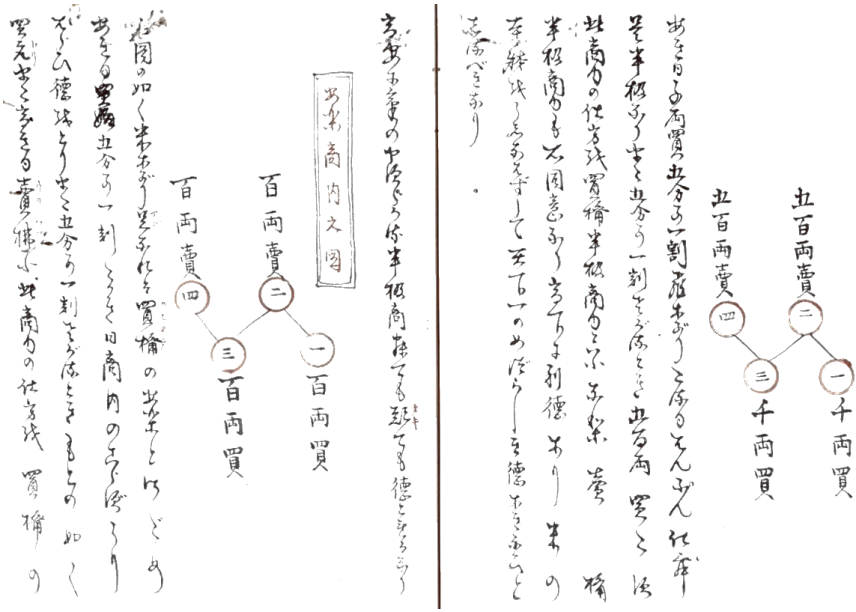

Figure 4.1: *
Manuscript page 12: the *half-plank* (半板商内之図, right) and the *at-ease* (安楽商内之図, left) figures, each a four-stage sequential cycle with red-circled stage-numerals ①②③④.

半板商内之図
Half-Plank Trade Diagram

Stage	Action	Intent
① one	千両買 (1000-*ryō* BUY)	initial position
② two	五百両売 (500-*ryō* SELL)	partial unwind on a rise
③ three	千両買 (1000-*ryō* BUY)	re-enter on pull-back
④ four	五百両売 (500-*ryō* SELL)	partial unwind on a rise

On an autumn day, in a light rain, buy — and as the spike runs five *bu* to one *koku*, settle out the half. This is the half-plank. When the next five-*bu* decline arrives, roll back into a 500-*ryō* buy. This trading method is called the buy-bucket half-plank trade.

There is gain in both rise and fall, without losing the essence of the rice — it is the rarest method under Heaven, and its profit is far beyond the ordinary. Know this.

4.3 The At-Ease Diagram

安楽商内之図
At-Ease Trade Diagram

Stage	Action	Intent
① one	百両買 (100-*ryō* BUY)	entry
② two	百両売 (100-*ryō* SELL)	exit on up-move
③ three	百両買 (100-*ryō* BUY)	re-enter on pull-back
④ four	百両売 (100-*ryō* SELL)	exit on up-move

On a fall-off day of five *bu* to one *koku*, sell out without remainder, take the profit, and when the price declines by another five *bu* to one *koku*, buy again as at first; when it rises swiftly, sell out.

4.4 The Reversal Diagram

転変商内之図
Reversal Trade Diagram

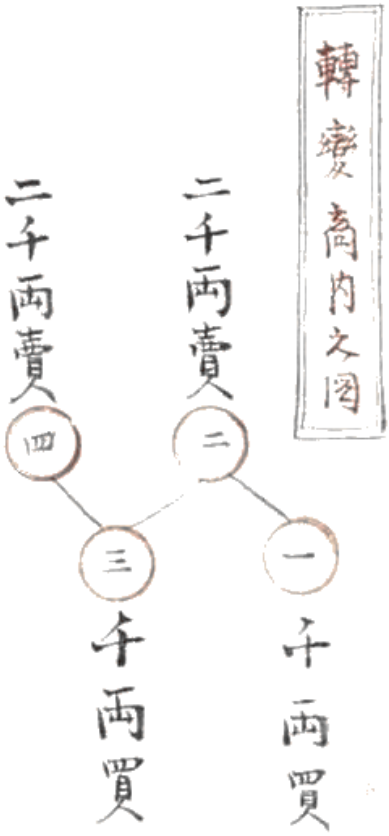

Figure 4.2: *
Manuscript page 13: the *reversal* (転変商内之図) figure — four stages, with the sell-legs (②, ④) each double the size of the buy-legs.

Stage	Action	Intent
① one	千両買 (1000-*ryō* BUY)	entry
② two	二千両売 (2000-*ryō* SELL)	double-size sell on rise
③ three	千両買 (1000-*ryō* BUY)	re-cover on pull-back
④ four	二千両売 (2000-*ryō* SELL)	double-size sell on rise

The reversal has two forms: the buy-bucket reversal (買桶転変) and the sell-bucket reversal (売桶転変). In the buy-bucket reversal, once you have judged the rice to be a broadly rising market, trade with many buys and few sells. At cheapness, buy 1,000 *ryō*; at a five-*bu* or one-step rise, sell 300, becoming 300 short; again at a five- *bu* or one-step move, buy 1,300, returning to the original 1,000-*koku* long held.

Without straining against the fundamental nature of the rice, following the strong-and-weak force of the thing in sequence — this is the secret of reversal-trading.

The reversal-trade, timed to the rhythm of the saw's teeth:[2] step into it and you cool the whole body.

[2] *Translator's note:* An idiomatic figure in the original; sense uncertain. The saw-teeth image likely evokes the back-and-forth rhythm of a price oscillating through a range.

Chapter 5

The Sixty-Year Fortune-Qi Almanac

万歳運気豊凶録

The Ten-Thousand-Year Record of Fortune-Qi: Plenty and Want

Compiled from **two hundred thirteen years**[1] — the two-stage, half-plank, carry-over-and-reverse trade.

Every year of the sixty-year sexagenary cycle is categorized below by expected weather and harvest conditions. The counts sum to sixty — the complete *dai-shū* (大周), the great cycle.

	Category	Years
1	暴風 Violent winds	12
2	洪水 Great floods	5
3	寒冷 Cold and chill	3
4	霖雨 Continuous rains	2
5	極凶 Extreme misfortune	8
6	豊作 Abundant harvest	28
7	中豊作 Middling abundance	2
	Total	**60**

5.1 Violent Winds — Twelve Years

甲子 (*Kinoe-Ne*), 丁卯 (*Hinoto-U*), 丁丑 (*Hinoto-Ushi*), 辛巳 (*Kanoto-Mi*), 甲申 (*Kinoe-Saru*), 辛卯 (*Kanoto-U*), 甲午 (*Kinoe-Uma*), 丁酉 (*Hinoto-Tori*), 丁未 (*Hinoto-Hitsuji*), 辛亥 (*Kanoto-I*), 甲寅 (*Kinoe-Tora*), 辛酉 (*Kanoto-Tori*).

木気鬱発　唐陰飛木

Wood-qi in concentrated eruption — Tang-shade, flying wood.

[1] *Translator's note:* The figure 二百十三年 in the section-header claims the empirical base from which the almanac's categorizations are drawn. The reading *213 years* is what the OCR returns; the number is legible but stands in a compound phrase alongside the trade-method name that follows, so the parsing "213 years" versus an alternate reading should be treated as indicative.

The years listed above are in themselves middling-ordinary years. However, when wood-qi erupts as an aberrant force and fire-winds blow through the seventh and eighth months, they become years of great disaster.

5.2 Great Floods — Five Years

己巳, 己卯, 己亥, 己酉, 壬戌.

太陰濕土 — *Greater yin, damp earth.*

The listed years are in themselves middling-early years. But when earth-qi erupts aberrantly and great floods sweep the fields through the seventh and eighth months, they become years of great disaster.

5.3 Cold and Chill — Three Years

乙丑, 乙未, 乙巳.

A break. The break reads: in this place, there is no settled method for trading. Reflect and consider.

5.4 Continuous Rains — Two Years

癸未, 癸丑.

陽明輝金　太陽寒水

The years above are years of strong cold in which the ten thousand things cannot easily flourish — great disaster years. However, if the aberrant force of fire-qi erupts in the sixth and seventh months, they become years of easy abundance.

5.5 Extreme Misfortune — Eight Years

No prescribed method. Reflect.

丙寅, 丙午, 庚戌, ...

> *Editor's note:* The OCR at this point in the manuscript returns a duplicated block, and only three readings can be individually confirmed without reference to the image. The complete list should be checked against the manuscript image before citation.

The great pole of the years listed — the *Mizunoe* years and *Mizunoe-Ne* — are the extreme-misfortune low. The rest, when the aberrant force of fire-qi emerges in the sixth and seventh months, become years of abundance.

5.6 Abundant Harvest — Twenty-Eight Years

These are the years in which one trades by the method of three-flats, two-stage, half-plank, at-ease, and reversal, at the autumn harvest moon.

戊辰, 庚午, 辛未, 壬申, 癸酉, 甲戌, 乙亥, 戊寅, 乙酉, 丙戌, 丁亥, 戊子, 己丑, 庚寅, 癸巳, 戊戌, 庚寅,[2] 辛丑, 壬寅, 癸卯, 甲辰, 戊申, 乙卯, 丙辰, 丁巳, 己未, 庚申, 癸亥.

5.7 Middling Abundance — Two Years

戊午, 壬辰.

Although these are abundant-even years, they are only the middling harbinger. The above completes the great cycle of sixty years.

5.8 On the Great and Small Tides (大潮小汐の考)

Know the *small-tide* days to be: the 6th, 7th, and 8th; the 9th; the 10th; the 21st and 22nd; and the 3rd, 4th, and 5th.

All days other than those listed are great-tide. Three days of small-tide are the “great-valley” days — when the great winds begin to blow. The wind sets off on the flood tide and dies at the full tide.

On the 15th and the last day of the month, the three low-tides: full at the sixth hour, and at both day and night pulling back at the ninth hour.

The flood-tide each day runs four *bu* more, and the ebb runs four *bu* later.

[2] *Translator’s note:* 庚寅 appears to recur at this position in the OCR stream, but the sexagenary cycle has only one 庚寅 per sixty years and a duplicate is mechanically impossible. One of the two readings — most likely the second — represents a misread of a different sign and should be checked against the image.

5.9 The Wind-Free Interval

From *Kanoe-Saru* for eleven days, and from *Kanoe-Uma* onward, with *Hinoto-Ushi* as the central day: over the fifteen days above, the wind does not blow.

From the *Kinoe-Tora* day, for seven days further, still no wind. Over these fifteen days of no wind, this is when one puts ships to sea. If by some chance the calm fails, it is an exception — know that even such an exception is only one year in a hundred.

Chapter 6

Weather Signs and the Nine-Body Song

6.1 On the Entry of the Rainy Season (入梅三十日)

Know that the rainy season (梅, *tsuyu*) enters at the horse-day beginning the fifth month and opens out at the middle of the sixth.

6.2 On Rainbows (虹図)

A morning rainbow — know in advance as a morning-rain sign. The rainbow at sunset, on the other hand, is fair weather.

6.3 The Hassen Twelve Days (八専十二日)

[1]

If light rain sets in at the beginning of the hassen, know in advance that it will keep raining until the end.

If it begins again after a pause, the twelve days — in the saying — pass in an unceasing return-rain that follows the boats.

6.4 On the Standing Cloud (玄雲)

A standing cloud mingled with red — know it for wind. White or black — know it for rain.

6.5 Song of Nine Bodies (九躰ノ歌)

〇一部極意　九躰ノ歌

[1] *Translator's note:* The *hassen* is a traditional twelve-day interval of the sexagenary calendar, running from the 壬子 (*Mizunoe-Ne*) day through the 癸亥 (*Mizunoto-I*) day.

無極 — *The Limitless (Mukyōku)*

The principle of highs and lows is an empty principle — invisible to the eye. A thing whose very body is without shadow and without form.

太極 — *The Supreme Ultimate (Taikyoku)*

The principle-without-principle that dwells even in the midst of right and wrong — only the rice-market's window.[2]

陰含陽 — *Yin Contains Yang*

When ten-thousand of ten-thousand are all weak-spirited, rice contains, within itself, the very principle by which it ought to rise.

陽含陰 — *Yang Contains Yin*

When a thousand of a thousand are all strong-spirited, rice contains, within itself, the very principle by which it ought to plunge.

高安大法 — *The Great Law of Highs and Lows*

The great flood falls upon the autumn harvest moon; the peak at mid-month; the end of the fifth month — these are the swayings of high and low.

[2] *Translator's note:* The phrase 米の窓のみなり is figurative; specific referent of the "window" image in classical rice-trade idiom is unclear.

Chapter 7

The Three Virtues Forty-Eight Verses

> *Editor's note:* The manuscript's self-count is explicit: the header reads 四十 八首 ("forty-eight verses"), with sub-headers 十首 / 廿八首 / 十首 assigning ten to Wisdom, twenty-eight to Benevolence, and ten to Courage.

	Virtue	Verses	Theme
智	*Chi* — Wisdom	10	pattern, season
仁	*Jin* — Benevolence	28	patience, waiting
勇	*Yū* — Courage	10	acting against the crowd
	Total	**48**	

7.1 Four Fixed-Form Rules

天ノ性 — *The Nature of Heaven*

By imperial edict or otherwise, know in advance that the division of the fifth month is the time at which natural profit arises.

商定式 — *The Fixed Form of Trading*

By edict or otherwise, follow the five-*bu* one-step, and forget the twenty-percent three-step as only silver-string.[1]

平来定式 — *The Fixed Form of the Ordinary Run*

Buying and selling should be balanced at a five-*bu* swing.

売買定式 — *The Fixed Form of Buying and Selling*

Know the buying times as the Dragon-Boat Festival and the harvest moon, with the seasonal anchor at Minazuki (sixth month) and Fumizuki (seventh).

[1] *Translator's note:* The figurative *silver-string* (糸銀) is opaque in isolation; likely a market-idiom for a minor or ornamental price effect to be disregarded in favor of the primary five-*bu* rule.

7.2 Wisdom (智) — Ten Verses

Once you have become a favorable-trader, you know — in a single stroke, even over ten-thousand *ryō* — the secret of the one who lays matters to rest.

To wait is benevolence. To face the market is to know the target of the sell-principle — know it as the wondrous art of the half-bridge trade.[2]

The celestial-origin trading-force may play out even over three years. Know this as the prime-trade epigraph of the flag-master.[3]

The echo of the cut-edge of Minazuki rice — at spring-field time, or in the evening, is a plunge downward.

Fifth-month rice, when sentiment is weak and its station honored even as it climbs — know this as the season of spike-upward trading.

7.3 Benevolence (仁) — Twenty-Eight Verses

Neither rushing the trade nor answering to impatience — to wait until the riding-together of waiting and gaining — this too is benevolence.

Simply: in the urging-urgent trading-force there is no profit. Buy the five-*bu* cheap; sell the five-*bu* high.

The more you hurry a trade, the more you lose. Simply stop; change hands and take another look.

Not-rushing-the-buy is the secret of the strong-spirited. Buy on hearing the pattern emerge.

Not-rushing-the-sell is the secret of the weak-spirited. In all seasons, wait for the ripening and sell.

The cheap prices that are not needed in three years or two: the big-weight hand is the one that waits without rushing.

Even in the principle of decline, if the time has come, it will not go lower. To rush the buy is a great foolishness.

When the force that ought to rise is spent, the place where it descends of itself — know that as the nature of heaven.

---

[2] *Translator's note:* 半橋商内: apparently distinct from the *half-plank* (半板) of Chapter 4, though the paired imagery suggests a related half-unwound position.

[3] *Translator's note:* The "flag-master" (蘭齋はたがしき) appears once in the text and is not clearly identified; possibly a named earlier commentator whose gloss was preserved in the transmission line.

The cheap price of the windless two-hundred-twentieth day: take it as the fixed form, receive it with the half-plank, and go.

When a price exists such that the ten-thousand to a man have given up in weariness — that is the distant edge of the previous high-run.

Wait for a day of rain and wind and sell rice; gain clear weather and buy rice.

The root source of the favorable-virtue wisdom, in the end, is the small progression — and at that source, too, benevolence stands in first place.

7.4 Courage (勇) — Ten Verses

The principle of the jewel: sell into plenty, buy into cheapness — this is the great secret of rice trading.

If there is a thirty-percent high-low, do not be startled — face it.[4]

Know it as principle: whenever there is a two-step-to-three-step high-low, face the rice.

At the thirty-percent high-low, profit reverses; to accept the loss without resistance — that is the secret.

When ten-thousand of ten-thousand are strong-spirited, become the fool and sell the rice.[5]

When field and mountain alike are all turned out and weak- spirited, become the dolt and buy the rice.

三俵鞘直照可〈レ〉逆

Three-tawara *spread-price: the reversal rule — read and reflect in reverse.*[6]

[4] *Translator's note:* Annotated in the manuscript with the Tenmei-recension marker 天明本 (*Tenmei-bon*).

[5] *Translator's note:* A second Tenmei-recension gloss runs in classical Chinese beside this verse: 米大崩大変不可驚可買 — "Great rice-collapse, great change: do not be startled; buy."

[6] *Translator's note:* The manuscript marks this closing rule with a *kundoku* return-mark 〈レ〉 inverting the last clause.

Chapter 8

The World-Levels Diagram and the Five-Stage Secrets

8.1 The National Reference Figures

Total rice yield: **28,085,482 *koku***.

Total field area: **947,801 *chō***.

8.2 The World-Levels Diagram (世の中三段之図)

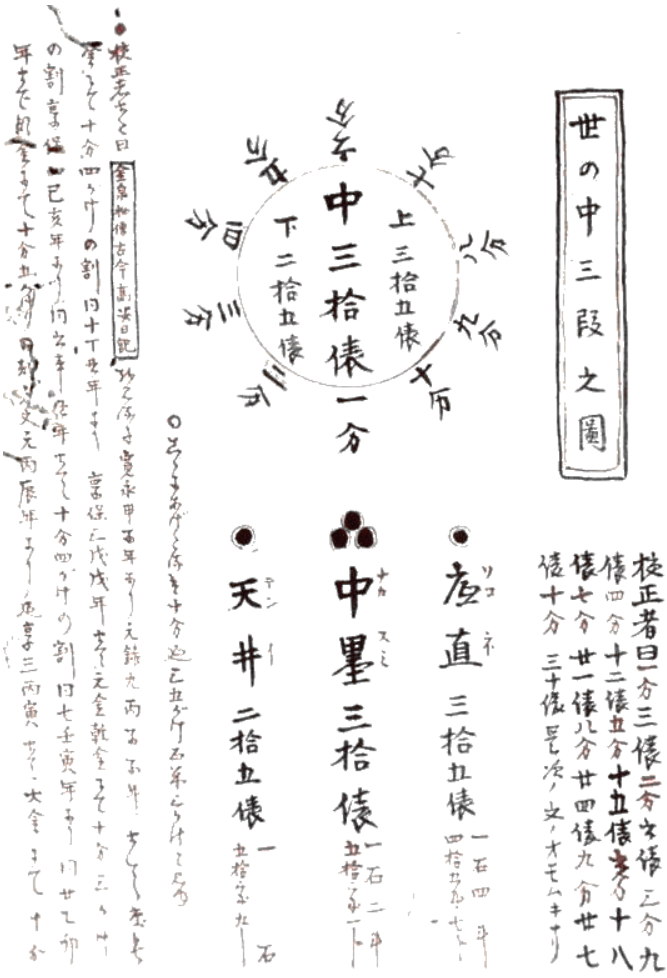

Figure 8.1: *
Manuscript page 21: the *World-Levels Diagram* (世の中三段之図). The three tiers of the figure — 上 (upper), 中墨 (middle-ink), 下 (lower) — frame the full operating range of the market around a central reference price.

The glosses for each tier, with the manuscript's weight- and-price annotations:

Level	Tawara	Weight	Price
● 天井 Ceiling	25	—	—
○ 上 Upper	35	一石四斗	四十五匁七分
◉ 中墨 Mid-ink	30+1 bu	一石二斗	五十三匁一分
○ 下 Lower	25	一石	五十三匁九分

Applying the method

Using the three-level method, one accumulates the good-and-bad of each year's world. A year of the upper division may run on for thirty years; a year of the lower division can run on for eight or nine.

Consider the out-turn of the low ranking. In a middle-division world, if the year's estimate is seven-tenths, multiply three times seven — twenty-one *tawara*. Take this as the middle-ink price.

For such a price: add six *tawara* of the thirty-percent drawdown buffer to get twenty-six *tawara* as the middle law. At year-end, this holds without variance — not even one hundredth-of-a-*monme* off.

8.3 The Strong-Qi Five-Stage Secret (強気五ツの秘伝)

[1]

Stage	Drawdown from middle-ink	Ryō
第一 First	一割半さげ 15 % down	100
第二 Second	二割さげ 20 % down	200
第三 Third	二割半さげ 25 % down	400
第四 Fourth	三割さげ 30 % down	800
第五 Fifth	三割余 over 30 %	1,000 — 2,000

These five stages are each a *tengen* trade-maxim. Whether a thousand or two thousand *ryō*, buy accordingly.

First, reckon the year's world at ten-tenths. Even in a year where the new-rice price is exceptionally high and you are certain it ought to fall thirty percent — by no means sell.

[1] *Translator's note:* The five-stage schedule below is reconstructed from a column of small-hand entries running down the side of the page; the OCR returns the stage labels and percentages legibly but at low confidence on individual cells. Treat the doublings (100 → 200 → 400 → 800 → 1,000+) as the manuscript's structural pattern; the precise step at any one stage should be checked against the image.

To buy at the one-and-a-half-tenths drawdown is the great secret. In any year, take the new-rice opening price as the middle-ink: this is the family secret.

From a middle-ink of 20 *tawara*, once the drawdown runs to three-step-plus and you see 27 or 28 *tawara*, buy a thousand or even two thousand *ryō*. Take it as the one-man's proof-of-concept. At such a level, the decline is a "six-and-stream" event[2] — one in a thousand.

8.4 The Weak-Qi Five-Stage Secret (弱気五ツの秘伝)

Stage	Rally from middle-ink	Ryō
第一 First	一刻半あげ 1.5-step up	100
第二 Second	二刻あげ 2-step up	200
第三 Third	二刻半あげ 2.5-step up	400
第四 Fourth	三刻あげ 3-step up	800
第五 Fifth	三割余 over 30 %	1,000 — 2,000

Same schedule as above, one and the same person.

[2] *Translator's note:* The phrase 六と川 is opaque; context and the surrounding "one in a thousand" make clear the sense is of an extraordinarily rare occurrence.

Chapter 9

The Compound Trades and the Seven Fortunes

○七福即生秘密巻目

The Secret of the Immediate Arising of the Seven Fortunes

In general, the Tang-edge is said to be three-step-down or three-step-up. However, as long as the buying side shows a one-step strength, there is no losing the buying side. In any year, take the new-rice opening price as middle-ink, and buy.

9.1 The Strong-Qi Reverse-Weight Trade

The reverse-weight trading force has its middle-ink. Up through two steps there is no one-step; beyond two steps there is no five-*bu*.

The trader builds a long across five scaled entries, reaching a **1,600-*ryō*** total at the extreme:

> Cumulative: 1,600-*ryō* long held; 180 *tawara* drawdown. A ten-percent rally yields 320 *tawara* gain — the voice of favorable virtue.

9.2 Favorable-Virtue Reverse-Loss Variants

強気一割あげ順徳逆損商内 Strong-qi ten-percent-up favorable-virtue reverse-loss. Five-way graduated scale-out (五方ならし) across a rally.

強気一割半あげ順徳逆損商内 Same schedule keyed to a 15 % rally threshold, in a tighter *tawara* band. Net: 800-*ryō* sell; 70-*tawara* drawdown at the turn; 160-*tawara* profit per one-step decline.

強気二刻あげ順徳丞様商内 Same idiom keyed to a two-step rally. At the *tengen*-mark on the second pass, the position reverses, and a further 200-*ryō* sell is initiated.

9.3 The Random-Edge Trade (度端一六の商内)

From a 20-*tawara* middle-ink, whenever the market slumps beyond three steps — or, alternately, rallies beyond three steps — always trade the one-hundred-*ryō*-sized lot at the low level.

Even if thinking in terms of one thousand or two thousand *ryō*, pack it in lightly. Even a thirty-percent-plus drawdown is only one case in a thousand; even a thirty-percent- plus rally is only a mountain-of-one in a thousand.

9.4 The Stake-Use Trade (立用商内)

In the stake-use trade, you do not speak of the gap — rather, from having heard the future ups and downs of rice, you reflect carefully and stake accordingly.

The stake-use is not much of a wrapping-in for those who trade in large size: the reason being that when you hold a long of 50,000 or 100,000 *ryō*, even if you wish to sell, as soon as you do, the side-market chases you down six or seven *bu* and can pursue you for up to a month.

9.5 The Follow-the-Color Trade (随色商内)

The law of the follow-the-color trade: at those moments when the genuine awareness is dulled, when nothing exceptional has occurred, and one is inclined to say no imperial edict will come, rice suddenly rallies five *bu* or seven *bu*. Have that ship sold, and buy at the place where it retraces five, seven, seven. This is called *follow-the-color*.

Still, stake only a hundred or two hundred *ryō*. Without certainty, to overdo the ease is the bold overhand of luggage.[1]

[1] *Translator's note:* The figurative 手荷の強気 is opaque in isolation; likely something like "the trader's own baggage" — a warning that an unsupported show of confidence is the trader's self-weight, not the market's.

Chapter 10

The Grand Diagram

第三　上割三下割三之圖

Third: The Upper-Three, Lower-Three Figure

The trade called *random-edge* — cutting desire and releasing it is its secret. That the greater-than-a-small-gap is the favorable: this is the root of rice-trading force. Therefore, without dispersing once, one cannot hope to rally a thousand times at the child's seat.[1]

Take this diagram as the secret of the random-edge. The center, in square-and-circle, figures heaven and earth. The four directions — east, west, south, and north — together with the four corners of *ken* and *kon*, compose the full *ten-tenths* of the figure.

> *Editor's note:* 十分 (*jippun*) here is the "ten-tenths" fractional estimation scale used throughout the book (a year's harvest reckoned in tenths; the middle-ink band divided into tenths), not a literal count of points in the figure. The passage prescribes a reading posture — orient by the four sides and four corners — rather than labeling every cell of the diagram.

[1] *Translator's note:* 子座に: opaque; possibly a reference to the *ne* (□, rat) position on the sexagenary clock-face, the north/zero point from which the cycle resets.

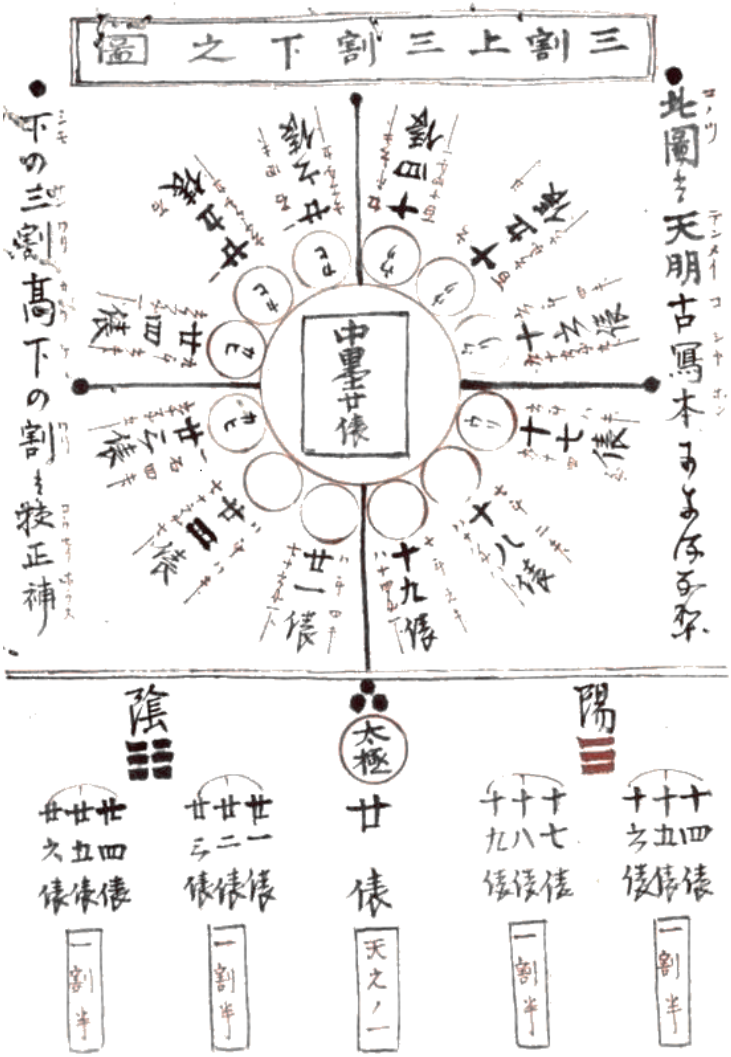

Figure 10.1: *
Manuscript page 28: the *Grand Diagram* (第三　上割三下割三之圖). At the center is the boxed 中墨廿俵 (middle-ink, 20 *tawara*) reference cell. Arranged around it, a ring of cells labeled with progressively higher and lower *tawara*-counts marks the diagram's price-bands (the legible readings include 廿一俵, 廿二俵, 廿三俵, 廿四俵, 廿五俵 on one side and 十九俵, 十八俵, 十七俵, 十六俵, 十五俵 on the other). Several named cells (陽一, 陰一, 太極, 大名) mark specific positions in red. Below the main figure, four tablet-cells carry further named *tawara*-count readings that elaborate the principal bands.

Chapter 11

Strong Qi, Weak Qi, and the Three First-Tier Secrets

11.1 The Bullish Bias

On the buying side: the principles of drought, wind-and-rain, heavenly disaster, and buying-enclosure — across spring, summer, autumn, and winter. Many are the reasons for strong spirit among those who take these as their ground.

On the selling side: there is not one principle other than waiting for the buying-enclosure to collapse. It is for this reason that, when the diagram is laid out, there is a one-tenth strength bias on the buying side.

11.2 The Effect of Strong Qi (強気の功)

When wind and rain are violent, there are ship-wrecks in every season; Edo and Osaka alike have gaps in shipping. The first principle is that each person takes heed. At times of violent wind, know it as a critical matter across all four seasons.

Monthly weather almanac

From the third or fourth month through the eighth or ninth month: when wind-and-rain are violent, the effect is flood damage to fields.

Fourth or fifth month: drought means no planting. Long rains rot the barley.

Fourth or fifth month: a great wind strikes the barley.

Sixth or seventh month: a great wind strikes the miscellaneous grains generally. Drought strikes field crops.

Ninth month: a wind strikes the rice directly.

Eighth or ninth month: summer rain rots the glutinous rice.

Fifth or sixth month: long rains bring cold that can extend half the year into a damaging autumn.

11.3 The Effect of Weak Qi (弱気の功)

At the very ear of a great-high price,[1] there will be proclamations on sake and the like — imperial notices. Besides these, there will also be proclamations of town-inspections. Consider these too.

Or — a wind that did not blow is said to have blown; a minor damage is spoken of as though it were the full ten-tenths; and there are years when feigned buy-ins are performed. Japan is the country of the gods: a country that takes uprightness as its root, and so the natural heaven is present above it.

11.4 The Rarity of the Perfect Year

Without damage at the planting, without the heavenly disaster of drought or wind-and-rain — what one may call a world at the full ten-tenths cannot come to be more than three years in a hundred.

Even if our own country is abundant, there may be countries to east, west, south, or north that have been blown over. Do not, do not, assume from one view of a single abundant-peace-year that the whole of Japan will be likewise.

In general, it is from the cheapest country first that prices rise. Consider this.

11.5 The Three First-Tier Secrets

Every year, read the opening trading-day level as the middle-ink: this is the first secret.

Buy the middle-ink at once: this is the second.

At the outset, stake the hundred-*ryō* trade-seal in true gold of one hundred *ryō*: this is the third secret.

11.6 Yin-Rice and Yang-Rice (陰米陽米)

There are such things as yin-rice and yang-rice. The rice that rises is yang; the rice that falls is yin. The reason: yin rolls into yang; yang climbs directly upward.

[1] *Translator's note:* The idiom 大高直段 の耳々 — literally "at the ear(s) of the great-high price" — means at its furthest extremity or peak.

Chapter 12

Afterword

嘉永四年五月三日　鳴川繁楽

Third day of the fifth month, Kaei 4 — Narukawa Shigeraku

> *Editor's note:* The afterword is on its own leaf, in dense flowing cursive, on paper that has taken heavy water- and insect-damage. Of all the pages in the manuscript it resists reading most stubbornly; what follows is a reconstruction of apparent sense.

12.1 The Opening Invocation

In the present age, faced with the needs before me — the lateness of the work — I have seen much that is lamented before it has even been seen: letters on fine papers, matters now reduced to paper-scraps.

12.2 A Single Step, a Thousand *Ri*

When the early-spring buying is applied wrongly, it becomes, as the saying has it, a *one-step error, thousand*-ri *deviation* — and, without helping, reversed, it turns instead into a great tree-land mistake.

12.3 Why Publish Now

Over these four or five years of study, with the limited daughter- of-time, the corrected manuscripts that people have been copying and passing on — many have grown too old and would be the opposite of right. Wishing to pull one out, compare, and set things right, I have put my hand aside, but the present-life-edition cannot yet be called settled.

And yet: ever since I entered upon this path, the wood-bark years[1] of my own life have gathered, and I still fear whether I may have, in selecting Ushida Daisuke[2] as the groundwork, introduced some deviation from his intent.

12.4 To the Discerning Reader

It is for those with seeing eyes (具眼の人, *gugan no hito*) to take the matter up: if any public court or six witnesses can be found, run the path to the heights and put the book to the test.

嘉永四年五月三日
Third day of the fifth month, Kaei 4
(approximately **May 2, 1851**)

鳴川繁楽
Narukawa Shigeraku[3]

[1] *Translator's note:* 木ばこのとし — "wood-bark years" — is a classical figure for the accumulating years of one's life.

[2] *Translator's note:* 牛田大介 (Ushida Daisuke). Whether a variant name of Ushida Gonzaburō — the author named on the printed colophon — or a separate figure in the Ushida transmission line, is not made explicit in the surviving text.

[3] *Translator's note:* 繁楽 is most plausibly a literary pen-name of 鳴川猛之助 (*Narukawa Takenosuke*), the editor named on the printed colophon of the opening leaf; the reading *Shigeraku* is one of several possible pronunciations of the compound.

Zhou Dunyi. *Taijitu shuo* (太極図説, Explanation of the Diagram of the Supreme Ultimate). Mid-11th century. In Wing-tsit Chan, trans. and comp., *A Source Book in Chinese Philosophy*, 460–465. Princeton: Princeton University Press, 1963. ISBN 978-0-691-01964-2.

Glossary of Key Terms

逢来 (*airai*)
Adverse conditions; a period of generally falling prices, typically lasting roughly three years within a twelve-to-thirteen-year cycle.

安楽 (*anraku*)
"At ease"; the second of the four-stage method diagrams (Chapter 4). A net-flat cycle of four alternating 100-*ryō* buys and sells — so called because the trader carries no overnight directional exposure.

智 (*chi*)
Wisdom; the first of the *three* trading virtues (□□□). Seeing the pattern, knowing the season.

帳合米 (*chōaimai*)
"Book rice"; forward contracts on rice, as opposed to physical rice.

中墨 (*nakasumi* / *chūboku*)
"Middle-ink"; the three-starred center-cell of the World-Levels Diagram (Chapter 8); the reference price against which the five-stage strong-qi and weak-qi schedules are read. Taken each year as the new-rice opening price.

度端 (*dohan*)
"Random-edge"; the family of discretionary scaling trades presented on page 28 under the heading 度端極意の巻 ("The Secret of the Random-Edge").

堂島 (*Dōjima*)
The Dōjima Rice Exchange in Osaka; the central marketplace for rice futures trading during the Edo period.

半板 (*hanban*)
"Half-plank"; the first of the four-stage method diagrams (Chapter 4). A net-long cycle of 1000-*ryō* buys alternating with 500-*ryō* sells — the trader is always running with half his plank still underfoot.

穂足 (*hosoku*)
"Spike-foot," or the ear-of-grain figure; the foundational candle-pattern metaphor introduced in the preface, from the shape of the rice grain itself (round in the middle, pointed at top and bottom).

仁 (*jin*)
Benevolence; the second of the three trading virtues, and the largest of the three verse-ranks (twenty-eight of the forty-eight verses). Patience, waiting, not rushing.

人気 (*jinki*)
"People-qi"; market sentiment; the collective mood of traders.

慈雲斎 (*Jiunsai*)
Ushida Gonzaburō's pen name; appears once in the manuscript immediately above his given name (page 5), attached to the text's original composition in Hōreki 5 (1755).

順来 (*junrai*)
Favorable conditions; a period of generally rising prices, typically lasting roughly ten years in a twelve-to-thirteen-year cycle.

順徳 (*juntoku*)
"Favorable virtue"; the positive-expectancy direction of the compound reverse-loss trades of Chapter 9.

禁制 (*kinsei*)
"Prohibition"; the closing clause-word of each of the Fifteen Prohibitions (Chapter 3).

古米 (*komai*)
Old rice; rice from previous harvests.

空理 (*kūri*)
"Empty principle"; the preface's term for the inherent formlessness of market motion. Paired with 定式 (*jōshiki*, "fixed form") in the philosophical move that justifies the whole project: the motion is empty, yet has a form, and from the form a method can be derived.

両 (*ryō*)
The gold coin unit of the Edo period; the standard unit of capital.

新米 (*shinmai*)
New rice; freshly harvested rice. The opening trading-day price of new rice is taken as the *nakasumi* each year.

底 (*soko*)
Bottom or floor; the lowest point of the price range.

太極 (*taikyoku*)
Supreme Ultimate; the Neo-Confucian concept representing undifferentiated unity. Opens the preface; named in the Nine-Body Song (Chapter 6).

俵 (*tawara* / *hyō*)
A bale of rice; the standard unit of measure and price quotation.

天元 (*tengen*)
"Celestial origin"; the top stage-marker of every position ladder in the book — the baseline price around which accumulation and distribution ladders are calibrated.

天井 (*tenjō*)
Ceiling; the top of the price range on the World-Levels Diagram.

転変 (*tenpen*)
"Reversal"; the third of the four-stage method diagrams (Chapter 4). A net-short cycle of 1000-*ryō* buys alternating with 2000-*ryō* sells — each sell simultaneously unwinds the prior buy and opens an equal-size short.

天明本 (*Tenmei-bon*)
"Tenmei recension"; the margin-annotation marker that recurs throughout the book indicating a parallel reading from a Tenmei-era (1781–1789) version of the text.

強気 (*kyōki*)
Strong qi; bullish sentiment or upward force. One of the two central force-concepts of the book.

運気 (*unki*)
Fortune-qi; the prevailing momentum of a given period. Compiled as an almanac in Chapter 5, the 万歳運気豊凶録.

弱気 (*jakki* / *yowaki*)
Weak qi; bearish sentiment or downward force.

勇 (*yū*)
Courage; the third of the three trading virtues. Acting against the crowd when the signs align.

随色 (*zuishoku*)
"Follow-the-color"; the discretionary short-rally-fade trade of Chapter 9.

About the Editor

Zach Booth is a software engineer at NASA Ames Research Center, where he uses AI systems—including Claude (Anthropic)—in his daily engineering workflow. Self-taught in Japanese since the age of eighteen and conversational in the language, he identified this manuscript in the Kyoto University Rare Materials Digital Archive and recognized that no accurate English translation existed.

He directed the translation using the same AI tools he works with professionally, but with a hard separation between the two stages: the cursive-to-Japanese reading was handled by NDL 古典籍OCR-Lite, a specialist character-recognition model from Japan's National Diet Library, while the Japanese-to-English rendering was handled by an LLM working only from the mechanical OCR output. Every editorial decision can be checked end-to-end: every English sentence traces to a specific line of NDL-OCR transcription, which traces to a specific region of the manuscript scan.

This is his first published translation. The complete source materials—original manuscript scans, transcription, working translation files, and LaTeX source—are available at:

Appendix A

Position Calculation Ladders

This appendix collects the manuscript's explicit position-building ladders — the quantitative apparatus behind the method-diagrams of Chapter 4 and the five-stage secrets of Chapter 8. The manuscript presents these as tight vertical columns of tawara-count, weight and price annotations around a central diagram. The tables below preserve the three explicit capital totals that the manuscript itself states in plain prose, together with the stage-names in their native sequence.

A.1 The Autumn-Moon 800-Ryō Ladder (秋名月商内)

From page 10 of the manuscript. Six named stages building an **800-*ryō*** long position from a 20-*tawara* middle-ink base.

Stage	Japanese	Ryō	Action
Celestial origin	天元	100	sell / reference
First step	一乗	100	(100-*ryō* sell)
Second coming	二来	400	sell
Three flats	三平	200	sell
Half-plank	半板	800	buy (reversal anchor)
At ease	安楽	800	final position

Summed totals (manuscript):
800-*ryō* buy; 70 *tawara* accumulated;
∼30 *ryō* payment; 40 *ryō* deposit; 70 *ryō* total.

A.2 The Ebisu 600-Ryō Sell-Ladder

From page 11. The 600-*ryō* distributional variant, dedicated to Nishinomiya Ebisu and Sumiyoshi Daimyōjō, keyed to the late-fifth-month pivot.

Stage	Japanese	Ryō	Action
Celestial origin	天元	100	sell / reference
One flat	一平	100	sell
Two flats	二平	200	sell
Distribution	出染	100	sell

Summed:
400-*ryō* sell; 30 *tawara* loss;
∼15 *ryō* payment; 10+ *ryō* deposit.
Profit-rice 160 *tawara*, less 30 bucket = **130**.

A.3 The Strong-Qi Five-Stage Secret

From page 22. The five-stage buy-on-dips schedule of Chapter 8, reproduced here in tabular form for reference.

Stage	Drawdown from middle-ink	Ryō
第一 First	15 % down (一割半さげ)	100
第二 Second	20 % down (二割さげ)	200
第三 Third	25 % down (二割半さげ)	400
第四 Fourth	30 % down (三割さげ)	800
第五 Fifth	over 30 % (三割余)	1,000 – 2,000

At each stage, from a 20-*tawara* middle-ink base:
800-*ryō* long cumulative; ∼70 *tawara* drawdown at entry;
160 *tawara* profit per one-step (一刻) rally.

A.4 The Weak-Qi Five-Stage Secret

The mirror schedule, from page 24 of the manuscript. Build a short into successive rallies:

Stage	Rally from middle-ink	Ryō
第一 First	1.5-step up (一刻半あげ)	100
第二 Second	2-step up (二刻あげ)	200
第三 Third	2.5-step up (二刻半あげ)	400
第四 Fourth	3-step up (三刻あげ)	800
第五 Fifth	over 30 % (三割余)	1,000 – 2,000

At each stage:
800-*ryō* short cumulative; ∼60–70 *tawara* loss at the turn; 160 *tawara* profit per one-step decline.
